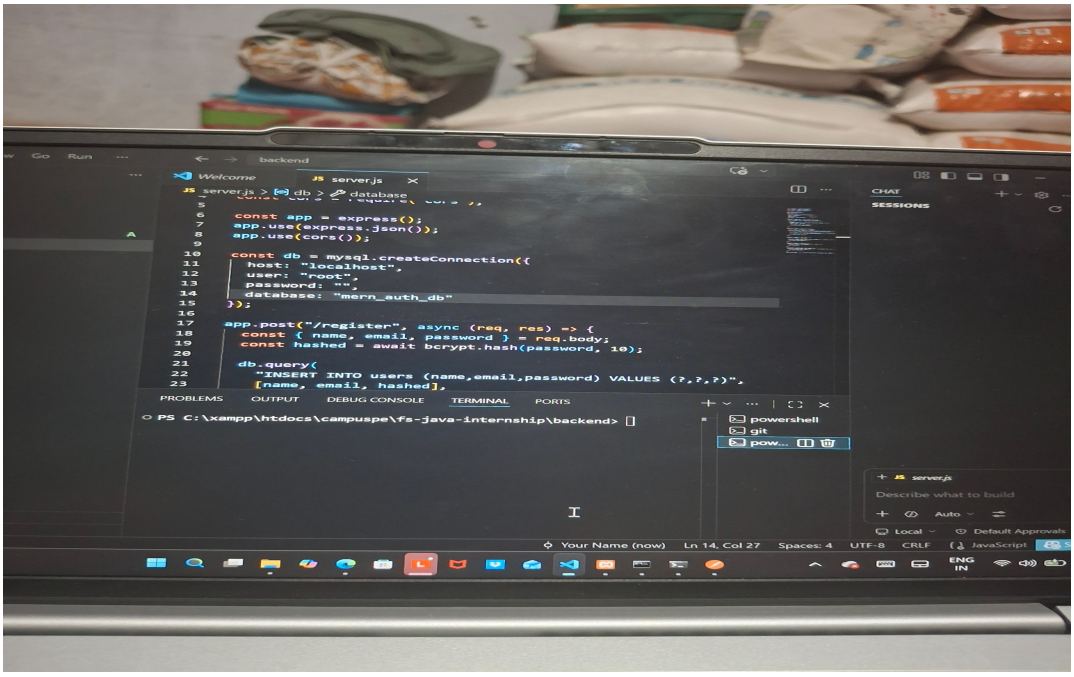
MERN Internship Assignment Report

Objective: Build authentication and item management backend using Node.js, Express, and MySQL.

Technologies Used: Node.js, Express.js, MySQL (XAMPP), bcryptjs, CORS, GitHub

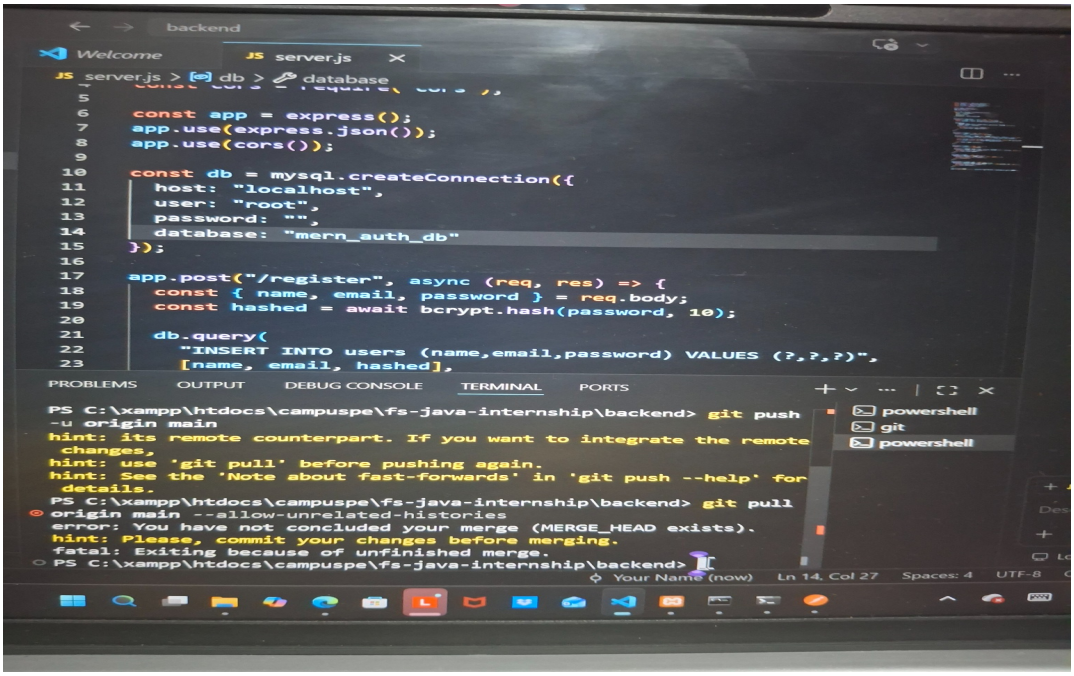
Backend Implementation:

The server is created using Express and connected to MySQL database. APIs are implemented for user authentication and item management.



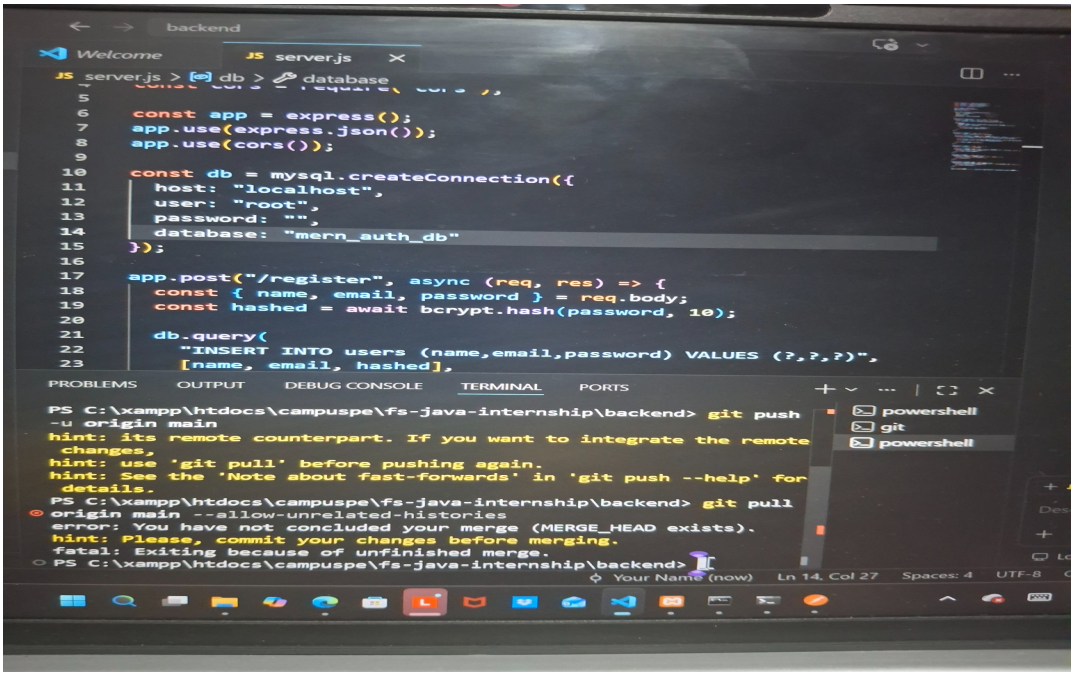
API Output:

The GET /items API returns stored items in JSON format.



Database Output (phpMyAdmin):

Items are stored correctly in MySQL database and verified using phpMyAdmin.



Conclusion:

The project successfully demonstrates backend development, authentication, and database integration.
